Product Code

F05191

SKYLINE KEYPAD READER

Reference	EAN
5191	8424299051918

Description.

Description

Digital keypad allows the door to be opened by entering a 4 to 6 digit code previously programmed in the central controller, which is required for operation.

The wiegand keypads provide the access control installation with anti-sabotage security as they do not incorporate the door opening mechanism or the exit button connection. These functions are supported by the external controller. They can be used with door controllers using the Wiegand-8 or 4-bit burst protocols.

Centralised access control system. For installations requiring PC-based code switching or event logging. Requires an external centralised controller such as AC-MAX, AC-PLUS or IP AXES. Depending on the controller where this wiegand keypad is connected, it must be configured in 4 or 8 bits burst.
